INVESTMENT OBJECTIVE AND STRATEGY

The Investor Fund intends to achieve for its participants long-term capital growth by primarily investing in a USD denominated* collective investment scheme that is focused on investing in alternative energy and energy technologies including: renewable energy technology; renewable energy developers; alternative fuels; energy efficiency; enabling energy and infrastructure. The Fund's benchmark is the MSCI All Country World Index (PHP).

CLIENT SUITABILITY

A client profiling process is performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are encouraged to update the resulting profile every three (3) years or if there's any change in his/her personal/financial circumstances. Before deciding to invest, clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, or seek an independent/professional opinion when necessary.

The METRO CLEAN ENERGY EQUITY FEEDER FUND is suitable only for investors who:

- Have an Aggressive profile.
- Want capital appreciation over the long-term by primarily investing in BlackRock Global Funds (BGF) – Sustainable Energy Fund Class D2 – USD
- Recommended investment horizon is at least five (5) years
- Participation in the Investor Fund shall be open to Filipino individuals, resident and non-resident aliens, and corporate accounts. However, persons from US, Canada, Indonesia, South Korea and Iceland are not allowed to open an account. For guidelines on US Person qualifications, refer to the Foreign Account Tax Compliance Act (FATCA).

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Market/Price Risk: The possibility for an investor to experience losses due to changes in the market prices of stocks/equities. It refers to the portfolio's exposure to marked-to-market valuation due to market price fluctuations of the stocks/equities.

Liquidity Risk: The possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a price that could result in a loss. This may be caused by low trading volume due to different reasons such as securities with small or few outstanding issues, absence of buyers and/or sellers (limited buy/sell activity) or underdeveloped capital market.

Credit Risk / Default Risk: The possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of fixed income security which the borrower issued. This inability of the borrower or counterparty to make good on its financial obligations may have resulted from adverse changes in its financial condition thus, lowering credit quality of the security, and consequently lowering the price (market/price risk) which contributes to the difficulty in selling such security.

Foreign Exchange Risk: The value of investments may be affected by fluctuations in the exchange rates of securities in a different currency other than the base currency of the Investor Fund. The Participants should note that the Fund is denominated in Philippine Peso and will be invested in a US dollar denominated share class of the Target Fund. The foreign currency position of the Investor will not be hedged.

Country Risk: The possibility for an investor to experience losses arising from investments in securities issued by/in foreign countries due to the political, economic and social structures of these countries. There are risks in foreign investments due to the possible internal and external conflicts, currency devaluations, foreign ownership limitations and tax increases of the foreign country involved which are difficult to predict but must be taken into account in making such investments.

Other Risks: Your participation in the UITFs may be further exposed to the risk of any actual or potential conflicts of interest in the handling of in-house or related party transactions by Metrobank. These transactions may include own-bank deposits; purchase of own-institution or affiliate obligations (stocks, mortgages); purchase of assets from or sales to own institution, directors, officers, subsidiaries, affiliates or other related interests/parties; or purchases or sales between fiduciary/managed accounts.

The Fund invests only in high-credit quality assets which are evaluated using a rigorous internal scoring model required under the Trustee's accreditation process and BSP regulations. Internal risk limits and position limits together with regulatory exposure limits are monitored, reviewed and strictly adhered to on a daily basis. The Fund may also use financial derivatives solely for hedging risk exposures.

THE UIT FUND IS NOT A DEPOSIT AND IS NOT INSURED BY THE PHILIPPINE DEPOSIT INSURANCE CORPORATION (PDIC). RETURNS CANNOT BE GUARANTEED AND HISTORICAL NAVPU IS FOR ILLUSTRATION OF NAVPU MOVEMENTS/FLUCTUATIONS ONLY. WHEN REDEEMING, THE PROCEEDS MAY BE WORTH LESS THAN THE ORIGINAL INVESTMENT AND ANY LOSSES WILL BE SOLELY FOR THE ACCOUNT OF THE CLIENT.

THE TRUSTEE IS NOT LIABLE FOR ANY LOSS UNLESS UPON WILLFUL DEFAULT, BAD FAITH OR GROSS NEGLIGENCE.

NAVPu GRAPH

NAVPu OVER THE PAST 12 MONTHS

Highest	1.193516
Lowest	0.982435

STATISTICS OF THE TARGET FUND

Volatility, Past 1 Year (in %) ²	16.91%
Sharpe Ratio ³	-0.27
Information Ratio ⁴	-0.78

² Volatility measures the degree to which the Fund fluctuates vis-à-vis its average return over a period of time. The lower the number, the more stable the Fund's return is relative to its average return over time.

³ Sharpe Ratio is used to characterize how well the return of a Fund compensates the investor for the level of risk taken. The higher the number, the better.

⁴ Information Ratio measures reward-to-risk efficiency of the portfolio relative to the benchmark. The higher the number, the higher the reward per unit of risk.

TARGET FUND FACTS

Name of Target Fund: BlackRock Global Funds (BGF) – Sustainable Energy Fund Class D2 – USD

Fund Currency: US Dollar

Fund Manager: BlackRock (Luxembourg) S.A

Fund Launch Date: March 15, 2001

Share Class Launch Date: May 19, 2006

Domicile: Luxembourg

Regulator: Commission de Surveillance du Secteur Financier

Benchmark: MSCI All Countries World Index (USD)

INVESTMENT OBJECTIVE

The BGF Sustainable Energy Fund seeks to maximize total return. The Fund invests globally at least 70% of its total assets in the equity securities of sustainable energy companies. Sustainable energy companies are those which are engaged in alternative energy and energy technologies including: renewable energy technology; renewable energy developers; alternative fuels; energy efficiency; enabling energy and infrastructure.

INVESTMENT POLICY

A. The Fund may be invested and reinvested in the following instruments that is focused on investing in alternative energy and energy technologies including: renewable energy technology; renewable energy developers; alternative fuels, energy efficiency; enabling energy and infrastructure:

- USD-denominated units/shares in collective investment schemes subject to the conditions under BSP Circular 767
- USD-denominated traded money market instruments
- USD and/or Peso-denominated deposits

B. The Investor Fund may invest a minimum of 90% of its fund in the Target Fund and a maximum of 10% in cash, deposits and other money market instruments. The investment of the Investor Fund in any Target Fund shall not exceed 10% of the Total Net Asset Value of the Target Fund.

Unit Investment Trust Funds

RISK FACTORS RELATED TO THE TARGET FUND

Contingent Convertible Bond Risk: In case of conversion into equity, the relevant Fund might be forced to sell new equity shares because the investment policy of the relevant Fund may not allow equity in its portfolio. Such a forced sale, and the increased availability of these shares might have effect on market liquidity in so far as there may not be sufficient demand for these shares.

Smaller Capitalisation Companies Risk: The securities of smaller companies may be subject to more abrupt or erratic market movements than larger, more established companies or the market average in general.

ESG Investment Policy Risk: The use of ESG criteria may affect an ESG Fund's investment performance and, as such, ESG Funds may perform differently compared to similar funds that do not use such criteria. ESG based exclusionary criteria used in an ESG Fund's investment policy may result in the ESG Fund foregoing opportunities to buy certain securities when it might otherwise be advantageous to do so, and/or selling securities due to their ESG characteristics when it might be disadvantageous to do so.

Sustainability Risk: The probability or uncertainty of occurrence of material losses relative to the expected return of an investment that relates to environmental, social or governance issues.

SUSTAINABLE INVESTMENTS

Sustainable Finance refers to any form of financial product or service which integrates environmental, social, and governance criteria into business decisions that supports economic growth and provides lasting benefit for both clients and society while reducing pressures on the environment. This also covers green finance which is designed to facilitate the flow of funds towards green economic activities and climate change mitigation and adaptation projects.⁶

The Target Fund adopts a "best in class" approach to sustainable investing. This means that the Target Fund selects the best issuers (from an ESG perspective) for each relevant sector of activities (without excluding any sector of activities). More than 90% of the issuers of securities the Target Fund invests in are ESG rated or have been analysed for ESG purposes.⁷

⁶ BSP Circular No. 1085 dated April 29, 2020

⁷ Prospectus of BlackRock Global Funds dated March 10, 2021

OUTLOOK AND STRATEGY

Fund/Index	MoM
Metro Clean Energy Equity Feeder Fund	-5.73%
MSCI All Country World Index (Net Total Return in PHP)	-3.01%
BlackRock Global Funds - Sustainable Energy Fund	-6.52%

*For the period September 30, 2023 to October 31, 2023

For the month of September, both the Metro Clean Energy Equity Feeder Fund and the Blackrock Global Funds - Sustainable Energy Fund underperformed against benchmark MSCI All Country World Index by 272bps and 351bps, respectively. The fund will continue to keep cash elevated amid volatility in the ESG sector.

Summarized from BlackRock's monthly commentary

Market overview: US Treasury yields rose further in October, with the yield on US 10 year Treasuries briefly reaching 5%, with higher for longer interest rate expectations, following stronger than expected US inflation and jobs data. With the attacks on Israel during the month we are witnessing a major humanitarian tragedy unfold in the Middle East, which impacted on investor risk appetite. In addition to the elevated geopolitical risk, the importance of energy security has become a focus for countries over the past year and is a key driver of investment in renewable energy solutions Global equity markets represented by the MSCI ACWI All Country World Index returned -3.0% in October. Within the sustainable energy theme the IEA published their World Energy Outlook 2023. IEA see the momentum behind clean energy transition as now sufficient for global demand for coal, oil and natural gas to peak before 2030. For China, projected additions of solar by 2030 is now 3x higher than the forecast from the 2021 outlook, demonstrating the acceleration in investment into renewables. The IEA do not see current policies as being aligned with a sub-2 degrees scenario, suggesting scope for further measures. Within clean transportation, EV sales are on track to rise from 10.5million vehicles to ~14million vehicles this year, however some auto manufacturers have announced delays to their EV launch plans, highlighting the challenge for legacy manufacturers of investing in EVs whilst managing near-term profitability.

Performance overview: The BGF Sustainable Energy Fund returned -6.6% in October 2023.

Stocks: Positive contributors to performance included the clean power utility companies Enel, RWE, Nextera and EDP. These companies have seen a de-rating this year on rising bond yields, but with interest rate expectations having adjusted, market focus shifted towards earnings results in October, which remain supportive. Nextera Energy reported a modest earnings beat in its Q3 results and reiterated full year earnings guidance. Design software group Dassault Systemes reported stronger revenue growth in its quarterly results, whilst electronic systems design group Cadence also reported results towards the top end of expectations. On the negative side the main detractors to returns were within clean transportation exposure. EV battery producers, including Fund holdings in Samsung SDI and LG Chem fell on market concerns around softening consumer demand in a higher interest rate environment and with some manufacturers delaying EV ramp up. We see these concerns as overstated and see these share price falls as offering attractive valuations. The market appears focused on the near-term, ignoring the structural transition, which continues to accelerate and has extrapolated developments on EV pricing, economic growth concerns and announcements of EV model delays from some large auto manufactures. Semiconductor companies STMicro, Infineon and Analog Devices were impacted by concerns over the pace of EV sales and broader semiconductor demand globally. ON Semiconductor reported a beat on its Q3 results but cautioned on the outlook for Q4. We believe the industry de-stocking cycle is largely complete and that demand should again improve moving into 2024.

Changes: During the month, the Fund rotated semiconductor exposure given relative valuation moves and exited one company and also initiating a new position. The fund increased exposure to a wind turbine manufacturer and to US rail freight and rotated exposure within clean power utilities given significant moves in valuation

Positioning & Outlook

The significant recent volatility in parts of the sustainable energy theme has driven valuations down to pre-covid levels, whilst the opportunity for earnings growth appears well-supported by the acceleration in investment in sustainable energy solutions in renewable power, in energy efficiency and in clean transportation. When the market becomes overly focused on the near-term, it often creates opportunities for investors who can look beyond short-term fluctuations and consider the medium and longer-term perspectives. We believe an acceleration in investment into sustainable energy companies is being driven by 3 powerful factors: Supportive regulation and policies in the US and Europe; Energy security has become front and centre driving a focus on investment at a level we have not seen before; The expectation that traditional energy prices remain higher for longer, making sustainable energy solutions appear more attractive. There is regulatory support for all aspects of the sustainable energy theme via the EU Green Deal, REPowerEU/Net Zero Industrial Act and the US Inflation Reduction Act. These policies also incentivise local sustainable energy related manufacturing, whilst China continues to focus investment in renewable power and clean transportation. Russia's invasion of Ukraine last year focused countries on their energy supplies. Renewable energy costs for onshore wind and solar PV remain the most economic technology choice for power generation in many markets, which is driving rapid adoption. We see similar cost competitiveness trends in other areas such as energy storage solutions in automotive electrification, where the transition to electric is driving an increase in EV adoption. Offshore wind has seen costs increase but remains an important sector for specific countries. The path to a lower carbon global economy is forecast to disrupt many industries and business models. However, this evolution is also expected to create remarkable opportunities. To quantify, the IEA's most recent estimates suggest annual clean energy investment will need to more than double by 2030 to US \$4trillion. The BGF Sustainable Energy Fund is positioned to capture such industry shifts and reap the benefits from this transition. We believe that the scale of the growth opportunity for the sustainable energy sector as a whole over the coming years has been under-appreciated both as a play on capital allocation and attractive long-term investment exposure.

IMPORTANT NOTICE

Metropolitan Bank and Trust Company is regulated by the Bangko Sentral ng Pilipinas (BSP). For any inquiries and complaints relating to Trust Products and Services you may (1) call our hotline: 8-8700-700 (Mondays-Fridays from 9:00am to 6:00pm); (2) send an email to customercare@metrobank.com.ph; or (3) visit our website at <https://www.metrobank.com.ph/invest/uitf> to know more.
